

AN ELLIPTICAL GLACIAL KAME GORGET AND A KNOBBED CRESCENT

by
Jim Stephan
Bradford, Ohio

This classic Glacial Kame gorget was originally collected by Dr. Stanley Copeland, Columbus, Ohio. It is made of banded slate and is 7-1/2 inches long. It was found in Logan County, Ohio, an area which produced a number of Glacial Kame sites.

Figure 1 (Stephan) Elliptical Glacial Kame gorget from Logan County, Ohio.

Dr. Hawes at one time had one of the prominent Indiana collections of prehistoric artifacts. One of his pieces was this Indiana knobbed crescent. It bears the Dr. Hawes catalog number Ha 833. It is over six inches long, made of banded slate, and is one of the rare bannerstone types.
